remove_menu_item ( )

accept_order ( )

update_availability ( ) .

* Abstraction Decisions :- We ignore details like, restaurant decoration, customer hobby and drivers personal life because they are not relevant to the food delivery. This keeps the system simple & focused on ordering, payment and delivery.

* Invented Software object :- "Order controller" is a software object that manages food orders.

Processes order requests and manges the payments and delivery. It doesn't exist as physicall objeet in the real world.
